## **IN THE SPECIFICATION**

Please replace paragraph [0047] with the following paragraph:

In addition to energy storage heat generation information and energy storage bank coolant flow information, the estimator 400 may optionally receive additional input information such as battery cell/module/assembly thermal resistance and/or heat capacity information 408, as well as one or more actual temperature measurements <u>410</u> taken from those locations in the energy storage system that might be physically accessible (e.g., ambient temperature, air temperature inside the battery box).
